Automated, AI-Assisted, Video Assessments

WHAT WE DO

Videra's video assessment platform empowers providers and clinicians to track patient progress through all levels of care and automatically identify, triage, and provide care to those patients who are most acute. Through Videra's platform, clinicians can send asynchronous video check-in assessments to patients to gather this consistent and data-rich information at intake, through the continuum of care, and post discharge. Increase patient recapture, improve outcomes, and increase revenue.

Videra can help increase revenue by:

1. Gathering direct patient quotes from audio/video, justifying additional days in treatment.

2. Improving patient outcomes, thus hitting payer designated metrics/measures.

3. Billing for Remote Patient Monitoring CPT codes as an FDA registered "software as a medical device."

Through a powerful integration between Videra Health and Kipu, patients discharged from a treatment program are automatically entered into standard or custom Videra follow-up assessments. The system then regularly checks in with these patients at critical points during their long-term recovery journey.

All this is done without additional clinical resources. Integration enhancements will also allow providers to get custom Videra patient assessment reports delivered back into their Kipu instance.

RESULTS

83% Increase in Clinical Capacity
Providers are able to treat more patients and improve patient retention by having continuous automated touchpoints; saving hours of work.
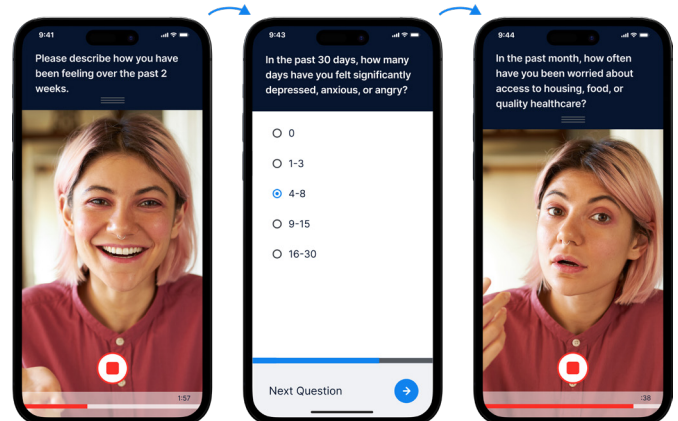

61% Engagement Rate
Our customers have seen up to 61% patient engagement rates. Engaged patients have higher satisfaction levels and better outcomes.

100x More Patient Data
AI analyzes each patient's voice, facial expression, movement, and language. This analysis helps pick up on and alert you to red flags.
